

Dear Customers,

Enclosed some information about our product: **Ramp Set Alu V2 (HART COAT)**

- This set includes 1x left & 1x right alu ramp with special HART COAT treatment for the Powerlock Differential.
- It is over 70% lighter than the standard steel ramp set.
- The engagement is much softer than with the steel version.
- Start with the same setting like you were run with the steel version and feel the difference.
- Important note – always run the diff with preload, if you don't use the preload screw you risk to damage the alu ramps and therefore reduce lifetime dramatically. This is a performance part and therefore lifetime limited, you need to check the parts regularly, as well changing oil as often as possible (minimum once per race weekend)

Have fun and enjoy – SCS M² Engineering Team
